

Heracles

Code available at <https://github.com/nagaraghav/Heracles>

Our app aims to help fitness trainers better manage their clients. Clients will be able to log their diet/calorie intake and nutrition information prescribed by their trainers on a daily basis. Trainers can then view client-specific logs on this app with a creative visualization of the data to detect trends over time or inspect data for a specific day.

Technical Details

- Firebase Backend
- Detects food automatically through API
- Retrieves Nutrition information (Natural Language Processing)
- Shows clear and aesthetic graphs
